

Security that Works!

See. Understand. Act.
Enterprise Security and Risk
Management Solutions

See. Understand. Act.

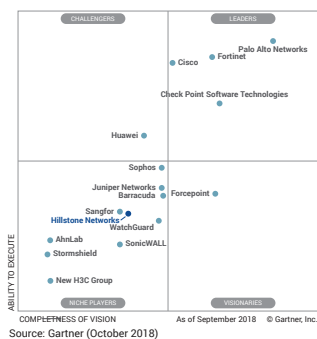

It's how 17,000+ enterprises are reducing their business risk with Hillstone solutions.

Security is now a risk management discipline. In this post-breach world, we've evolved from perimeter-based security to needing pervasive security across enterprise campuses, branch locations, private data centers and public cloud. Point solutions don't provide the scope of protection needed, and enterprises need an innovative, affordable platform that can provide end-to-end coverage.

Hillstone Networks's enterprise security and risk management solutions provide visibility, intelligence and protection to ensure enterprises can comprehensively **see**, thoroughly **understand** and rapidly **act** against cyber-threats. Recognized by leading analysts, Hillstone's solution easily deploy across edge to the cloud providing a scalable security suite that fits any enterprise. Our mantra "**Security that Works!**", was born from customers frustrated with hyperbolic competitor claims who then experienced Hillstone's family of security and risk management solutions.

Positioned in three Gartner Magic Quadrants for its vision of Layered Defense

Magic Quadrant for Enterprise Network Firewalls

Magic Quadrant for Unified Threat Management (SMB Multifunction Firewalls)

Magic Quadrant for Intrusion Detection and Prevention Systems

"Hillstone **CloudHive** offers a **micro-segmentation** solution for virtual VMware networks along with **CloudEdge** virtual firewalls for the networks over the cloud. This offering makes Hillstone a **strong vendor for cloud security** use cases..."

Hillstone firewalls are a good candidate for enterprises with hybrid networks, such as **on-premises, cloud and virtualized environments** in the above mentioned regions..."

"Hillstone supports a **wide range of detection and prevention options** with signatures, behavioral analytics, anti-malware and cloud-based sandboxing available as options..."

Incident Response

Data Center Scale

Elastic Security Architecture

Hillstone's X10800 top-of-line chassis-based firewall designed to meet the need of the most demanding service providers, large enterprise, and carrier networks. The X10800's patented Elastic Security Architecture and innovative hardware design, provide outstanding performance, reliability, and scalability. With

1 Tbps of processing power and built-in security intelligence, data center operators have uncompromising visibility across all traffic. Hillstone's patent-pending Twin Mode solution

synchronizes firewall security states in redundant data centers ensuring uninterrupted service during vMotion between two data centers.

Cloud Security

Micro-segmentation and NFV

Hillstone's CloudHive is an advanced Micro-segmentation solution designed for the demands of the virtualized data center. It provides unprecedented fine-grained visibility to see deep into VM's, intelligence to understand virtual network threats, and control to rapidly mitigate VM attacks.

Hillstone's CloudEdge provides both comprehensive security protection for the Virtual Private Network (VPC) in the public cloud, and Network Function Virtualization (NFV) environment. Hillstone's Cloud Security Solution spans all cloud platforms, providing deployment automation, and efficient service orchestration.

Security Analytics

Intelligent Breach Prevention

Hillstone Networks has a unique and effective approach to deal with advanced threats. With its sophisticated layered defense, multiple patented detection engines, and targeted threat correlation capabilities, Hillstone solutions can detect and mitigate advanced threats at every stage of the threat trajectory. Hillstone's Intelligent Next-Generation Firewall (INGFW) and Server Breach Detection System (sBDS), provide a unique way to see and understand threats enterprise-wide, so security teams can rapidly act to stop them.

SD-WAN

Built on Security Foundations

Hillstone's edge solution provides the most comprehensive security for SD-WAN deployment. In addition to a robust security platform that provides the visibility to see what's going on at the edge, our SD-WAN solution also provides the intelligence to understand which of the 3,000+ applications are running, and act to dispatch traffic with the right level of security. Hillstone's SD-WAN solutions also provide centralized management, zero-touch deployment, and superior QoS with active link monitoring.
