

Security that Works!

With More than 15,000 Enterprises Protected Today by Hillstone Solutions, It's Clear our Solutions Work.

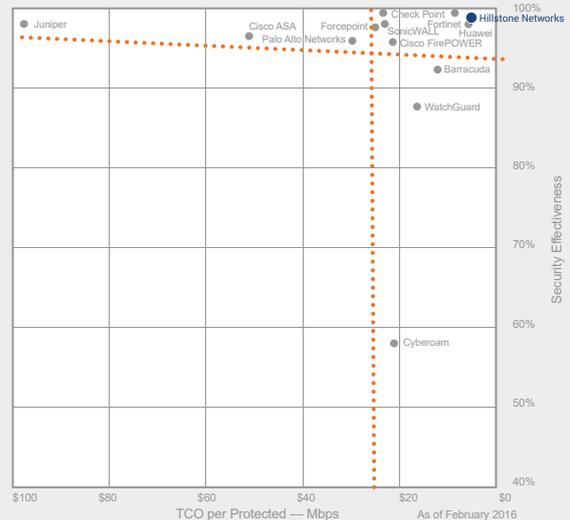

While network security companies boast about their products, Hillstone Networks has steadily added new products that match the needs of modern companies based on real-world needs. Our business model is to make network security work for your organization.

We do that by inventing new technologies where one doesn't exist, by optimizing existing, proven technologies to make them faster and more effective, and by packaging them as a solution to make deployment and management simple. We listen to you and adapt our products to meet your needs.

Industry Recognition

Positioned in the Gartner Enterprise Network Firewalls Magic Quadrant

NSS Labs Recommended NGFW with Best Customer Value

Hillstone has been named to Gartner's Magic Quadrant for Enterprise Network Firewalls for two consecutive years. The annual report evaluates companies according to "Completeness of Vision" and "Ability to Execute," and Hillstone has been recognized for its vision and customer-focused technology by industry leaders.

Hillstone Networks NGFW provides excellent overall value with lowest TCO and is ranked in the top three best Next-Generation Firewalls. The NSS Labs results reinforce Hillstone Networks' security leadership and the company's commitment to provide the highest levels of protection and best TCO to its more than 15,000 customers globally.

Four Network Security Initiatives

At Hillstone Networks we solve a wide array of security challenges for our enterprise customers and Service Providers. We're highlighting four network security initiatives that you may be tasked to solve. Visit our website for additional information on each of the network security initiatives.

Advanced Threat Prevention

Today's cyber attackers have become ever more sophisticated, using targeted, persistent, stealthy and multi-phased attacks to avoid detection at network perimeters through traditional security measures. These advanced threats frequently change and mutate, eventually, becoming the so-called 0-day attacks. Ransomware is the most typical advanced threat now, combining new malware variants and new attack tactics to make it an increasing threat to all organizations. It also makes conventional techniques ineffective.

Where We Fit Hillstone Networks has a unique and effective approach to deal with advanced threats such as Ransomware. With its sophisticated layered defense, multiple patented detection engines, and targeted threat correlation capabilities, Hillstone solutions detect and mitigate ransomware at every stage of its threat trajectory.

Micro-Segmentation for Virtualized Data Centers

As datacenters have evolved from physical to virtual, enterprise to cloud, the security challenges they face have also evolved. The cloud-enabled data center needs a new security strategy and solution that can cope with virtual demands with minimal performance impact. Micro-Segmentation is critical in ensuring security in the cloud. It addresses the gaps in visibility and control of traffic at the virtual machine level.

Where We Fit Hillstone CloudHive is an advanced Micro-segmentation solution designed from the ground up for the demands of the virtualized datacenter. It provides unprecedented traffic and threat visibility, reducing the datacenter threat surface to near-zero. It offers dynamic deployment flexibility and elasticity with business efficiency and cost effectiveness that today's virtual environments require.

Security for Network Function Virtualization (NFV)

Network Function Virtualization (NFV) is designed to consolidate and deliver the networking components needed to support a fully virtualized infrastructure – including virtual servers, storage, and other functions such as the firewall, which are also known as Virtualized Network Function (VNF) modules. This NFV/VNF deployment is typically complex and requires automatic orchestration support.

Where We Fit Hillstone provides a complete VNF solution for NFV environment which support various cloud platforms, deployment automation, service orchestration and more. This is the key reason that Hillstone Networks is a leading security vendor with the broadest compatibility and multiple production deployment for NFV.

Security as a Service for MSSPs

Security management is always a headache for customers, regardless of whether it's a large enterprise or small business. On the one hand, customers need a more smart and flexible centralized management solution to maximize operational efficiency. On the other hand, Managed Security Service Providers (MSSPs) have evolved to help customers with security management and operations.

Where We Fit Hillstone CloudView platform is designed to meet these requirements. CloudView's robust cloud-based services enable customers to monitor their network security posture in real-time from anywhere on any device. Admins have an active pulse on the network health status. CloudView delivers to MSSPs the capabilities to make managing the security operations for customers more efficient, less costly, and faster to turn on. So once a customer signs-up for the service, the hand-off is fast. End-customers still appreciate having access to monitoring activities, licenses, and more.

Hillstone Networks Product Portfolio

Perimeter Protection			Server Protection	Cloud Protection	Security Management
 E-Series Next-Generation Firewalls (NGFW)	 T-Series Intelligent Next-Generation Firewalls (iNGFW)	 X-Series Data Center Next Generation Firewalls	 I-Series Server Breach Detection System (sBDS)	 CloudEdge Security Solution for Network Function Virtualization (NFV)	 CloudView Cloud-based Security Management and Analytics Platform
 S-Series Network Intrusion Prevention System (NIPS)	 Cloud Sandbox Malicious File Identification and Detection Platform			 CloudHive Micro-segmentation Solution for Virtualized Data Centers	 HSM Hillstone Security Management Platform
					 HSA Hillstone Security Audit Platform
Security Service					

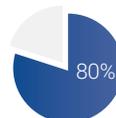

Company Achievements

10 years solid revenue and growth projectile

15,000+ global customers, including 60+ Fortune 500

Solid traction in verticals: Carrier/ISP, Finance, Education, etc.

Over 100,000 firewall devices shipped

Strategic Alliances

Awards & Certificates
